1. About this document

1.1. Use of the operating and installation instructions

The operating and installation instructions are part of the pump.

➔ Pass on the operating and installation instructions to the next owner.

Project pumps

Customer-specific project pumps (pump models which begin with "PL" or "PML") may differ from the operating and installation instructions.

➔ In the case of project pumps, take note of any additionally agreed specifications.

1.2. Symbols and markings

Warning

This symbol indicates a potential danger.

It also indicates the possible consequences of failure to observe the warning. The signal word (i.e. "Warning") indicates the level of danger.

➔ This specifies measures for avoiding the danger and the consequences of failure to implement these measures.

<table>
<thead>

</table>

Tab. 1

Other information and symbols

➔ This indicates an activity (step) that needs to be carried out.

1. This indicates the first step of an activity to be carried out. Any additional steps required are consecutively numbered.

This symbol indicates important information.
2. **Use**

2.1. **Intended use**

The pumps are intended for transferring and metering liquids.

**Owner’s responsibility**

- Only install and operate the pumps under the operating parameters and conditions described in Chapter 4, Technical data.
- Pumps must only be operated when fully assembled.

**Operating parameters and conditions**

- Before transferring or metering a medium, check that it can be transferred without risk in the specific application case.
- Before using a medium, check the compatibility of the materials of the pump head, pump housing, diaphragm and valves with the pumped medium.
- The temperature of the medium must lie within the permissible temperature range (see Chapter 4).
- The pumped medium should not contain particles as these can prevent the pump from working correctly. If this cannot be guaranteed, a filter < 100 μm with sufficiently large filter area must be used upstream of the pump.

2.2. **Improper use**

The pumps must not be operated in an explosive atmosphere.

**Requirements for transferred medium**

For special modifications outside the standard technical specifications please contact a KNF pump specialist.
3. **Safety**

Note the safety precautions in Chapters 6. *Installation and connection*, and 7. *Operation*.

The pumps are built according to the generally recognized rules of technology and in accordance with the pertinent occupational safety and accident prevention regulations. Nevertheless, dangers can result during their use which lead to injuries to the user or others, or to damage to the pump or other property.

Only use the pumps in perfect working order and in accordance with their intended use. Always ensure adherence to the operating and installation instructions and work in a safety-conscious manner.

**Personnel**
Make sure that only trained and instructed personnel or specially trained personnel work on the pumps. This especially applies to assembly, connection and servicing work.

Make sure that all personnel have read and understood the operating and installation instructions, and in particular the “Safety” chapter.

**Working in a safety-conscious manner**
Always ensure adherence to all pertinent accident prevention and safety regulations when working on and operating the pump.

**Handling dangerous media**
When pumping dangerous media, observe the safety regulations for handling such media.

**Notes**
Always ensure adherence to all information stickers on the pumps, such as flow direction arrows and type plates, and keep stickers in legible condition.

**Environmental protection**
All replacement parts should be properly stored and disposed of in accordance with the applicable environmental protection regulations. Ensure adherence to the pertinent national and international regulations. This especially applies to parts contaminated with toxic substances.

**Disposal**
Dispose of all packaging in an environmentally appropriate manner. The packaging materials are recyclable.

Ensure that the pump is disposed of in an environmentally appropriate manner at the end of its useful life. Use appropriate waste collection systems for the disposal of end-of-life equipment. Used pumps contain valuable recyclable materials.
EU directives/standards

The pumps are in accordance with the requirements of the guidelines 2011/65/EU (ROHS2).

The pumps conform to the safety requirements regarding electromagnetic compatibility in EC Directive 2004/108/EC.

Under Machinery Directive 2006/42/EC, pumps are partly completed machinery, and as such should not be regarded as ready for use. The partly completed machinery must not be put into service until the final machinery into which it is to be installed has been declared to be in conformity with the provisions of this Directive. Always ensure implementation and enforcement of the basic requirements of the Machinery Directive 2006/42/EC according to Appendix I (General Principles).

The following harmonised standards are met:

**NF 1.60 DCB-B / DCB-4B**
- IEC/EN 61000-6-2
- IEC/EN 61000-6-3

**NF 1.60 DC**
- EN 55011

Customer service and repairs

All repairs to the pump(s) must be carried out by the relevant KNF Customer Service team.

Only use KNF original parts for all maintenance work.
4. Technical data

Pump materials

Tab. 8
5. Assembly and function

Assembly

Diaphragm liquid pumps are based on reciprocating displacement pump technology. An elastic diaphragm (4) is moved up and down by the eccentric (5) and the connecting rod (6). During the down stroke, the diaphragm sucks in the medium through the inlet valve (2). During the up stroke, it forces medium out of the pump head through the exhaust valve (1). The diaphragm hermetically seals off the working chamber (3) from the pump drive (7).

NF 1.60 version (specified flow rate)

This pump type represents this product in its simplest form and delivers media at the specified flow rate.
6. **Installation and connection**

Only install the pumps under the operating parameters and conditions described in Chapter 4, Technical data. Observe the safety notes (see Chapter 3).

6.1. **Installation**

➔ Before installation, store the pump at the installation location to bring it up to ambient temperature.

Mounting dimensions ➔ Mounting dimensions (see Fig. 3 to 5)

Fig. 3: Mounting dimensions NF 1.60 DCB-B

Fig. 4: Mounting dimensions NF 1.60 DCB-4B

Fig. 5: Mounting dimensions NF 1.60 DC
Installation location ➔ Make sure that the installation location is dry and the pump is protected against water in the form of rain, spray, splashes and drips.

➔ Protect the pump against dust.

➔ Protect the pump against vibration and impact.

➔ The pump can be mounted in any orientation.

➔ Generally speaking, the pump can be mounted in any orientation. For maximum precision and rapid venting, install pump as shown in the illustration (Fig. 6).

KNF recommends mechanically decoupling the pump from the pipework system, e.g. by using flexible hoses or pipes. This prevents any oscillations of the pump being transferred to the system.

6.2. Electrical connection

For pumps with direct current motors:

➔ Pump should only be connected by an authorised specialist.

➔ Only connect the pump when the power supply is turned off.

➔ All electrical connection work must adhere to the pertinent norms, directives, regulations and technical standards.

Connecting the pump

1. Make sure that the power supply data match the data on the motor type plate. The current consumption can be found on the type plate.

2. Connect the motor cables. For electrical data see Chapter 4.

Always check polarity of cables.

For DC motors:
red motor lead: +
black motor lead: -

In the case of brushless DC motors:
incorrect polarity may damage the electronics.
6.3. Hydraulic connection

- **Connected components**: Only connect components to the pump that are designed to handle the hydraulic data of the pump (see Chapter 4, Technical data).

- **Hoses**: Only use hoses that are suitable for the maximum operating pressure of the pump (see Chapter 4).

  - Only use hoses that are sufficiently chemically resistant to the liquids being pumped.
7. **Operation**

- The pumps should only be used under the operating parameters/conditions described in Chapter 4, Technical data.
- Ensure that the pumps are being used correctly (see Chapter 2.1).
- Improper use of the pumps must be prevented (see Chapter 2.2).
- Observe the safety notes (see Chapter 3).
- Pumps are components intended to be incorporated into another machine. Ensure that the machinery/equipment in which the pumps are installed complies with the pertinent regulations before putting them into service.

---

**CAUTION**

Risk of burning
The drive heats up.

- Avoid contact with the pump drive.
- Avoid contact with flammable materials.

---

Excessive pressures and the dangers thus caused can be prevented by using a bypass system with a pressure relief valve between the pressure and suction side of the pump. Further information is available from your KNF specialist (Telephone number: see first page).

Pump standstill

- If the pump stops running, reduce the pressure in the system until it is at normal atmospheric pressure.

For pumps with thermal switch or electronic overload protection:

---

**WARNING**

Risk of physical injury and damage to the pump due to automatic start

If the pump overheats and the thermal switch / electronics stops pump operation, the pumps will restart automatically as soon as they have had time to cool down.

- Take steps to ensure that this cannot produce a hazardous situation.

---

**Switching the pumps on and off**

The motor speed of the pump, and thus the flow rate, is adjustable and can also be regulated to some extent.

For more details, see Chapter 4, Technical data

**Duty cycle / short cycle operation**

KNF pumps are designed for continuous operation.

Short start and stop cycles may adversely affect the service life of the brushed motors.

- If the pump is operated with short cycles in your application, please contact a KNF pump specialist for further information (Telephone number: see first page).
Turning the pump on

➔ In order to guarantee that the pump can start every time it is advisable to reduce the back pressure to an acceptable level. This must also be done after a short power cut.

ℹ️ For more specific information contact the KNF specialists.

Turning the pump off

➔ KNF recommends: if pumping aggressive liquids, the pump should be rinsed thoroughly prior to switch off (see Chapter 8.2.1), as this will help to lengthen the service life of the diaphragm.

➔ Restore the system to normal atmospheric pressure (release hydraulic pressure in pump).

Fig. 7: Flow rate of pumps NF 1.60 DCB-B / DCB-4B and NF 1.60 DC
8. Servicing

8.1. Servicing schedule

<table>
<thead>
<tr>
<th>Component</th>
<th>Servicing interval</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pump</td>
<td>Regular inspection for external damage or leaks</td>
</tr>
<tr>
<td>Pump head</td>
<td>Clean if the flow rate decreases, the pump does not work or no vacuum is created (Chapter 8.2)</td>
</tr>
<tr>
<td>Diaphragm, valve plates and seals</td>
<td>Change as soon as pumping capacity decreases, preferably sooner</td>
</tr>
</tbody>
</table>

Tab. 9

8.2. Cleaning

**WARNING**

Health hazard due to dangerous substances in the pump
Depending on the medium pumped, risk of caustic burns or poisoning.
➔ Wear protective clothing if necessary, e.g. protective gloves.
➔ Rinse the pump with a neutral liquid and pump empty.

8.2.1. Flushing the pump

➔ If pumping aggressive media, KNF recommends flushing the pump with a neutral fluid under atmospheric conditions for a few minutes before switching off, to extend the service life of valves and diaphragm.

8.2.2. Cleaning the pump

➔ Where possible, wipe the components with a dry cloth. Do not use cleaning solvents as these may corrode plastic parts.
➔ If there is compressed air available, blow off components.

Prior requirements

- Pump or drive must be switched off and disconnected from mains.
- The pump must be free of any hazardous substances.
- Hoses must be disconnected from the pump head.
- We recommend replacing the diaphragm when the head parts are removed.

Tools

<table>
<thead>
<tr>
<th>Qty.</th>
<th>Tool</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>T10 Torx screwdriver</td>
</tr>
</tbody>
</table>

Tab. 10
Dismantling the pump head
1. Undo the 4 head screws (1) using a Torx T10 screwdriver.
2. Undo the union nut (5) and remove hose. Leave clamp ring (6) on hose.
3. Remove seal (3) and resonating diaphragm (4) from the connecting plate (7).

Removing the valves and seals
4. Remove both anchor valves (9) from the intermediate plate (10) and the connecting plate (7).
5. Remove both anchor valve seals (8) from the connecting plate (7).
6. Loosen the rolled diaphragm (11) by means of the connecting plate (7). Make sure that no washers (12) fall into the housing. We recommend replacing the rolled diaphragm (11).

Cleaning the parts
7. Clean the anchor valves (9), anchor valve seals (8), resonating diaphragm (4) and associated seal (3) and rolled diaphragm (11) with a cloth and then blow off with compressed air.
8. Use compressed air to blow out the intermediate plate (10), connecting plate (7) and head plate (2).

Mounting the diaphragm
9. Check position of insert ring (13)
10. Screw rolled diaphragm (11) with washers (12) into the connecting rod. Make sure that no washers (12) fall into the housing.
11. Tighten rolled diaphragm carefully using the connecting plate (7).

Mounting the valves and seals
12. Place the seals (8) and anchor valves (9) into the intermediate plate (10) and the connecting plate (7).
Mounting the pump head

13. Insert intermediate plate (10)
   CAUTION: Make sure that the orientation is correct so that the connections point in the right direction.
   A pin and hole system prevents incorrect assembly.

14. Place the connecting plate (7) on top of the intermediate plate (10).

15. Insert seal (3) and resonating diaphragm (4) in connecting plate (7).

16. Place head plate (2) on connecting plate (7) and secure using the 4 head screws (1).

17. Push hose with clamp ring (6) onto connecting plate (7) and secure with union nut (5).

8.3. Replacing diaphragm, valves and seals

Same procedure as in Chapter 8.2, "Cleaning", except that the rolled diaphragm (11), resonating diaphragm (4), anchor valves (9) and seals (8) are replaced rather than cleaned.
## Troubleshooting

### Pump does not work

Tab. 13

**Fault cannot be rectified**

If you are unable to identify any of the above causes, please send the pump to KNF customer services (see address on last page).

1. Flush the pump to clear the pump head of any hazardous or aggressive fluids (see Chapter 8.2.1).
2. Dismantle the pump.
3. Clean the pump (see Chapter 8.2.2).
4. Send the pump, with completed decontamination declaration (see Chapter 10), to KNF customer services stating the nature of the pumped medium.
10. Decontamination declaration

KNF shall only undertake to repair the pump on condition that the customer provides certification of the transferred media and the cleaning of the pump (decontamination declaration).

In order to send a product back use the decontamination declaration, which either was delivered with the product or is available on www.knf.com (Downloads).

Please fill in the pump type, serial number, pumped media and all other required information. Send the signed form together with the product to your KNF representative.
